METHOD OF AND SYSTEM FOR COOLING A BACKUP POWER SYSTEM

Examiner: Yuan

S.N. 10/085,477

Art Unit: 1745

April 15, 2004

Election/Restrictions

Applicant's election with traverse of Group II, claims 17-22, in Paper filed on April 4, 1. 2004 is acknowledged. The traversal is on the ground(s) that the operation of the backup power system recited in Group III without the cooling system would be impractical. The independent claim 27 recites a backup power system comprising an electrochemical power system and a flow path for transferring fluid. The intended use "for powering a cooling system upon or after the occurrence of a power outage or reduction condition" in the claim does not add structure to the claim. Intended use of a known compound (system) does not give it patentable weight. See In re Thuau, 57 USPO 324, CCPA 979 135 F2d 344, 1943. It is evident that the backup power system is a stand-along system that does not need a cooling system. Applicant also contends that two distinct cooling systems recited in claims 1-16,23-26 and claim 30, respectively, are merely different embodiments of the same invention. Applicant does not submit evidence or identify such evidence showing the species to be obvious variants or clearly admit on the record that this is the case. Therefore, Invention I-1 (claims 1-16,23-26) and I-2 (claim 30) are considered as patentably distinct species as admitted in the statement above from the Applicant. Claim 1-16,23-30 are withdrawn from further consideration by the examiner per 37 CFR 1.142(b), as being drawn to a non-elected invention.

The requirement is still deemed proper and is therefore made FINAL.

Art Unit: 1745

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 17,20,21 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 40-43 of copending Application No. 09/930,557. Although the conflicting claims are not identical, they are not patentably distinct from each other because both applications claim the process of cooling a backup power system that powers a cooling system.

Art Unit: 1745

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Yang (US 6,692,852 B2) teaches a generating system for a fuel cell, and heat waste recirculation and cooling system of said generating system. Imazeki et al. (US 6,673,482 B2) teach a cooling system for a fuel cell includes a heat exchanger for cooling coolant discharged from the fuel cell and a heat regulator for adjusting a temperature of coolant to be supplied to the fuel cell.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dah-Wei D. Yuan whose telephone number is (571) 272-1295. The examiner can normally be reached on Monday-Friday (8:00-5:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patrick J. Ryan, can be reached on (571) 272-1292. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
